PUR Faucet Filter Certified to Reduce Lead in Drinking Water

What’s in your box
A  Filter Unit
B  Filter Cartridge
C  Adapters (you’ll only need one of these)
D  Rubber Gaskets (they match up with the adapters)

Adapter Installation
Every sink faucet has a round tip at the end that can be removed. Unscrew and remove the aerator on your faucet. Try out the different adapters (C) to find the one that best fits your faucet. Once you find the best fit, put the rubber gasket (D) on the adapter and screw the adapter onto your faucet.

Filter Installation
Step 1
Unscrew the top of the filter unit (A).

Step 2
Remove your filter cartridge (B) from its plastic wrapping and place the cartridge into the top of the filter unit (A). The ‘front’ arrow on the filter cartridge should line up with the PUR logo on the front of your filter unit. Screw on the top of the filter.

Step 3
Install the filter unit onto the adapter attached to your faucet by simply pushing it on until you hear a click.
See the next page for information about how to use your new filter.
Using your filter

There is a black lever on the side of your filter unit. When it is flat, you are NOT using your filter. Push the black lever down for filtered water. Only run COLD water through the filter at all times. To use unfiltered water, push the black lever up.

When you use your filter for the first time ONLY, run cold water for five minutes. After that, your filter is ready for use whenever you turn on your faucet. You will not need to run the water everyday for five minutes through your filter.

When should you use filtered or unfiltered water?

Changing your filter

Each time you use your filter, a light will flash on the front six times.

- **Green** - your filter is working
- **Yellow** - your filter is working, but you will need to change it soon.
- **Red** - It is time to change your filter. Revisit step 2 of filter installation once you have your new filter cartridge.

Removing your filter

Should you need to remove your filter, there is a quick release option. There are small white buttons on each side of the adapter. Squeeze them in at the same time and the filter unit will come off.

Use a filter certified to reduced lead in water. Look for the certification number, NSF Standard 53, if you’re buying a filter. It is important to follow directions recommended by the manufacturer. Visit the Berrien County Health Department website at [www.bchdmi.org](http://www.bchdmi.org) to learn more.
